DEFRA (Ref: MO43) For Weather Forecast Planning Issued on Tuesday, 21 May 2024 at 05:40 Local time

Air Quality Forecast for the UK

Issued by the Met Office

Today: Light winds and warm sunshine may lead to localised pockets of Moderate air pollution building up in a few spots of England and Wales, with a smaller risk elsewhere in the UK. However, air pollution levels will generally remain Low for most areas.

Tomorrow: Localised Moderate levels remain possible Wednesday. However this is uncertain due to a broad area of rain moving into eastern parts, before spreading further west, keeping levels Low for most.

Outlook: Generally Low levels across the UK through the period, however light winds and warm sunshine will bring the potential for further pockets of Moderate levels to develop, mainly on Saturday.
